

## ExpertNet and Cyber-Ark Software

For more information on how we can help you implement an effective password management system, please contact us.

**ExpertNet is a premier provider of Integrated Solutions, Professional Services, and Strategic Partnerships in Network Storage, Security, and LAN/WAN Infrastructure. ExpertNet combines best-of-class integrated solutions, expert professional services, and people-oriented customer service to exceed expectations.**

In our quest to continually support our customers with the best network security solutions available, we present them with a solution from Cyber-Ark Software that will allow them to centrally manage their enterprise's Administrative Passwords – the Enterprise Password Vault.

Most enterprises spend millions of dollars building a sophisticated infrastructure to ensure the security and continuity of their networks, but are they protecting and effectively managing the “keys” to this infrastructure? Our customers tell us that mismanagement of administrative and root passwords is a major cause of security breaches and one of the main reasons for long recovery processes from IT failures. Consider the additional expense and risk to a company that could result under these scenarios if administrative passwords are not adequately protected.

If your IT Staff shares Administrative Passwords such as Local Administrator or Root passwords or if you are concerned that these keys to your enterprise are not optimally managed, then we would like the opportunity to discuss how the Password Vault has ensured compliance with audits, and automated the management of sensitive administrative passwords for many of Cyber-Ark's customers. These customers are also benefiting from the Password Vault in a number of other key ways:

- Unique Admin Passwords are assigned to thousands of servers and routers yet easily accessed by authorized users
- Admin Passwords can be automatically changed on remote machines and updated in the Password Vault
- IT Administrators can only access passwords that each Administrator is authorized to view
- Password Vault tracks and visually flags each time a password in the Vault is accessed
